

proof.

Cover

AI research. Evidence you can check.

For students and professionals.

Verify the claims in AI-assisted work
against the academic evidence.

Claim / paper / passage

proof.

Opening scenario

The answer sounded right.

An AI-assisted draft

"The intervention
doubled productivity."

2x

The academic passage

"Tasks were completed
18% faster, on average."

18%

An assignment. A client report.
The same unchecked claim.

Illustrative scenario. The quoted study and draft are fictional.

proof.

Problem and audience

AI output can look credible. The evidence may not be.

Academic access is incomplete.

Relevant papers can be missed.
Full text may be unavailable.

Hallucinations survive formatting.

References can be invented.
Real papers can be misrepresented.

Research evidence

The citation looked real.

56%

fabricated or inaccurate
in one controlled study

176 references generated by GPT-4o

- 35 fabricated references
- 64 real references with errors
- 77 accurate references

June 2025 · Six mental-health literature reviews · Straightforward prompts

99 / 176 = 56.3%. Study-specific result, not an error rate for every AI tool.

Linardon et al., 2025

How can we check AI-assisted research before we rely on it?

Before it reaches a reader, reviewer, or client.

proof.

Solution · Demo follows

Proof compares the claim with the academic evidence.

1 Bring your draft.

Paste text or upload a document.

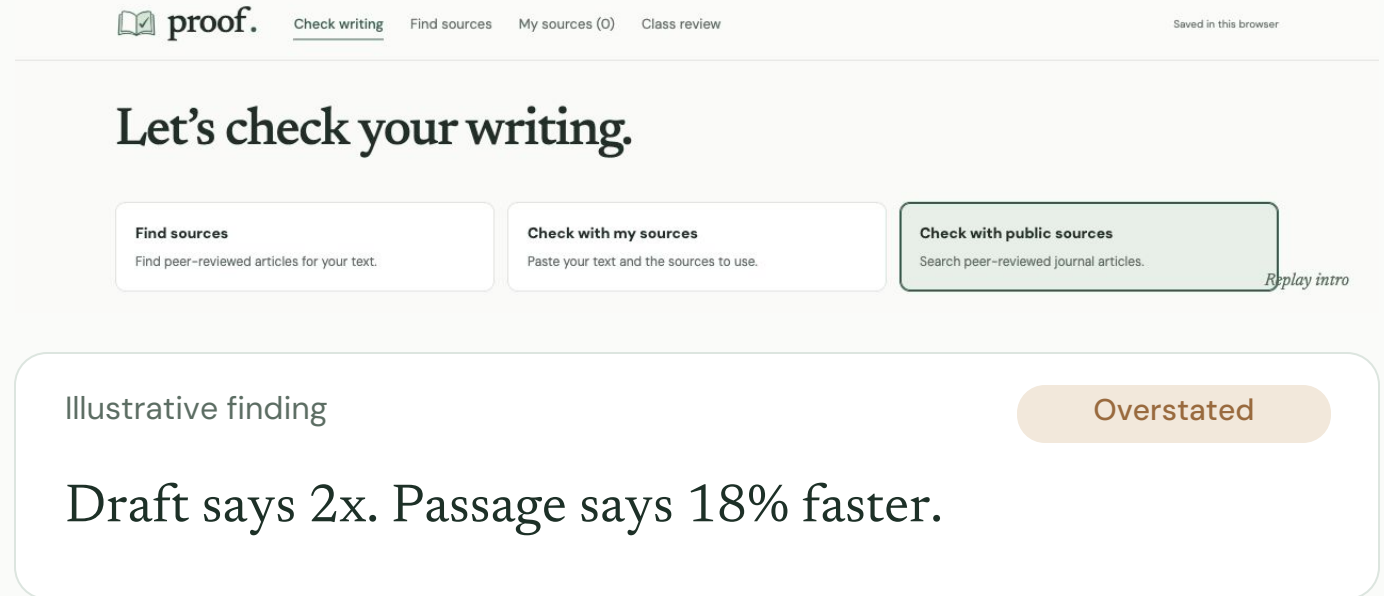

2 Find or add papers.

Locate eligible academic sources.

3 Inspect each finding.

Read the evidence before revising.

Current interface

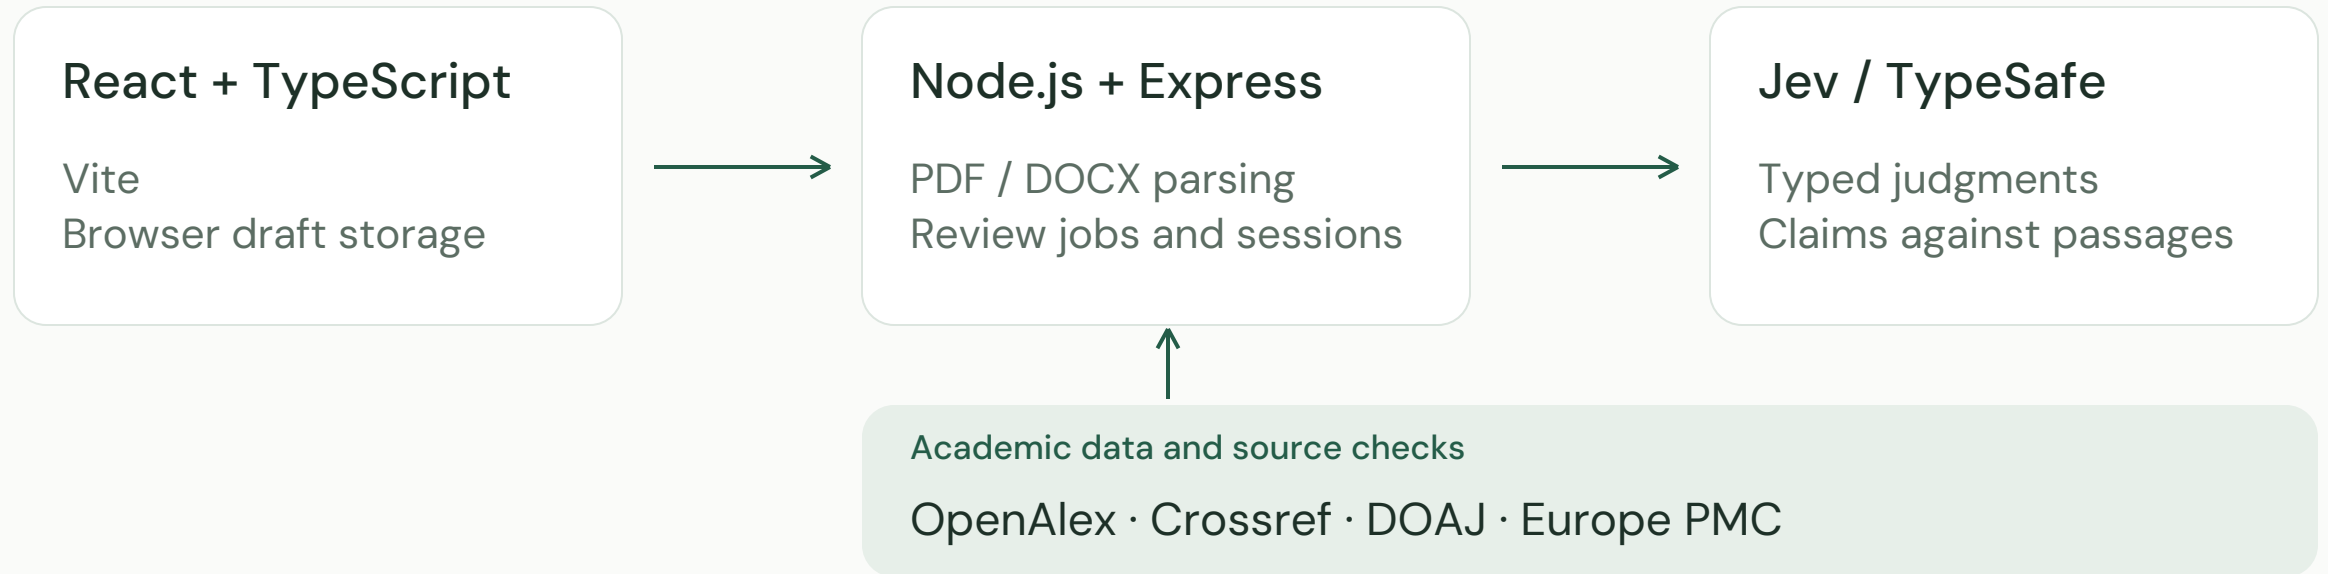

Live demo next: find a paper, check a claim, inspect the passage.

proof.

Tech stack

A workflow built around the source evidence.

Missing or conflicting evidence stays unverified.

proof.

Design system

Trust starts with what you can inspect.
